Brussels, 29.1.1981.

**COMMISSION OIL BULLETIN NO. 81**

447.41

The weekly bulletin, published by the Commission gives the latest available data relating to the formation of prices in the Community.

The Commission considers that these bulletins should contribute to greater transparency as regards Community oil markets.

From 31st December 1978 to 19th January 1981 the prices of crude oil and petroleum products have evolved as follows in current dollars :

- a) FOB prices for the Community's average external supplies of crude oil rose by 167% as a result of the decisions taken by the oil exporting countries;
- b) the pre-tax consumer prices for the principal oil products<sup>(1)</sup> reflected increases in price for crude oil and imported finished products to the extent that they increased by an average of around 108% in the Community.
- c) if these prices had been in line with the Rotterdam spot prices, the figure would have been 118% instead of 108%.

(1) This level is particularly sensitive to variations in the value of the dollar in relation to the various national currencies. When prices expressed in national currencies are constant over a given period, appreciation of the dollar results in a fall in prices expressed in dollars, while conversely a decline in the value of the dollar leads to a rise in dollar prices.

Attached also, one table which indicates consumption price levels expressed in the national currencies.

**COMMISSION OIL BULLETIN NO.82**

4917.41

The weekly bulletin, published by the Commission gives the latest available data relating to the formation of prices in the Community.

The Commission considers that these bulletins should contribute to greater transparency as regards Community oil markets.

From 31st December 1978 to 26th January 1981 the prices of crude oil and petroleum products have evolved as follows in current dollars :

- a) FOB prices for the Community's average external supplies of crude oil rose by 173 % as a result of the decisions taken by the oil exporting countries;
- b) the pre-tax consumer prices for the principal oil products<sup>(1)</sup> reflected increases in price for crude oil and imported finished products to the extent that they increased by an average of around 105% in the Community.
- c) If these prices had been in line with the Rotterdam spot prices, the figure would have been 114% instead of 105%.

(1) This level is particularly sensitive to variations in the value of the dollar in relation to the various national currencies. When prices expressed in national currencies are constant over a given period, appreciation of the dollar results in a fall in prices expressed in dollars, while conversely a decline in the value of the dollar leads to a rise in dollar prices.

Attached also, one table which indicates consumption price levels expressed in the national currencies.

**COMMISSION OIL BULLETIN NO.83**

4417.41

The weekly bulletin, published by the Commission gives the latest available data relating to the formation of prices in the Community.

The Commission considers that these bulletins should contribute to greater transparency as regards Community oil markets.

From 31st December 1978 to 2nd February 1981 the prices of crude oil and petroleum products have evolved as follows in current dollars :

- a) FOB prices for the Community's average external supplies of crude oil rose by 173% as a result of the decisions taken by the oil exporting countries;
- b) the pre-tax consumer prices for the principal oil products<sup>(1)</sup> reflected increases in price for crude oil and imported finished products to the extent that they increased by an average of around 102% in the Community.
- c) if these prices had been in line with the Rotterdam spot prices, the figure would have been 114% instead of 102%.

(1) This level is particularly sensitive to variations in the value of the dollar in relation to the various national currencies. When prices expressed in national currencies are constant over a given period, appreciation of the dollar results in a fall in prices expressed in dollars, while conversely a decline in the value of the dollar leads to a rise in dollar prices.

Attached also, one table which indicates consumption price levels expressed in the national currencies.

- Selling price of petroleum products

The Petroleum Bulletin No. 83 contains amongst other things, annexed, two tables which indicate at 15th November 1980 consumption price levels most often used, including taxes, for each of the principal petroleum products in the member states of the Community.

These prices, expressed in the national currency of each Member State, (with an indication at the given date of the rate of exchange against the dollar and the European Unity of Account) are made up by adding on the one hand the price less tax (estimated on a weekly basis in each of the Commission's Petroleum Bulletins) and the various charges and taxes in force in each Member Country.

The Commission considers that these bulletins should contribute to greater transparency as regards Community oil markets.

From 31st December 1978 to 16th February 1981 the prices of crude oil and petroleum products have evolved as follows in current dollars :

- a) FOB prices for the Community's average external supplies of crude oil rose by 173% as a result of the decisions taken by the oil exporting countries;
- b) the pre-tax consumer prices for the principal oil products<sup>(1)</sup> reflected increases in price for crude oil and imported finished products to the extent that they increased by an average of around 94% in the Community.
- c) if these prices had been in line with the Rotterdam spot prices, the figure would have been 109% instead of 94%.

(1) This level is particularly sensitive to variations in the value of the dollar in relation to the various national currencies. When prices expressed in national currencies are constant over a given period, appreciation of the dollar results in a fall in prices expressed in dollars, while conversely a decline in the value of the dollar leads to a rise in dollar prices.

Attached also, one table which indicates consumption price levels expressed in the national currencies.

Brussels, 5th March 1981.

COMMISSION OIL BULLETIN NO. 86

44/7.41

The weekly bulletin, published by the Commission gives the latest available data relating to the formation of prices in the Community.

The Commission considers that these bulletins should contribute to greater transparency as regards Community oil markets.

From 31st December 1978 to 23rd February 1981 the prices of crude oil and petroleum products have evolved as follows in current dollars :

- a) FOB prices for the Community's average external supplies of crude oil rose by 173% as a result of the decisions taken by the oil exporting countries;
- b) the pre-tax consumer prices for the principal oil products<sup>(1)</sup> reflected increases in price for crude oil and imported finished products to the extent that they increased by an average of around 105% in the Community.
- c) if these prices had been in line with the Rotterdam spot prices, the figure would have been 117% instead of 105%.

(1) This level is particularly sensitive to variations in the value of the dollar in relation to the various national currencies. When prices expressed in national currencies are constant over a given period, appreciation of the dollar results in a fall in prices expressed in dollars, while conversely a decline in the value of the dollar leads to a rise in dollar prices.

Attached also, one table which indicates consumption price levels expressed in the national currencies.

- Selling price of petroleum products

The Petroleum Bulletin No. 86 contains amongst other things, annexed, two tables which indicate at 15th December 1980 consumption price levels most often used, including taxes, for each of the principal petroleum products in the member states of the Community.

These prices, expressed in the national currency of each Member State, with an indication at the given date of the rate of exchange against the dollar and the European Unit of Account) are made up by adding on the one hand the price less tax (estimated on a weekly basis in each of the Commission's Petroleum Bulletins) and the various charges and taxes in force in each Member Country.

**COMMISSION OIL BULLETIN NO. 88**

The weekly bulletin, published by the Commission gives the latest available data relating to the formation of prices in the Community.

The Commission considers that these bulletins should contribute to greater transparency as regards Community oil markets.

From 31st December 1978 to 9th March 1981 the prices of crude oil and petroleum products have evolved as follows in current dollars :

- a) FOB prices for the Community's average external supplies of crude oil rose by 173 % as a result of the decisions taken by the oil exporting countries;
- b) the pre-tax consumer prices for the principal oil products<sup>(1)</sup> reflected increases in price for crude oil and imported finished products to the extent that they increased by an average of around 106% in the Community.
- c) if these prices had been in line with the Rotterdam spot prices, the figure would have been 120% instead of 106%.

---

(1) This level is particularly sensitive to variations in the value of the dollar in relation to the various national currencies. When prices expressed in national currencies are constant over a given period, appreciation of the dollar results in a fall in prices expressed in dollars, while conversely a decline in the value of the dollar leads to a rise in dollar prices.

Brussels, 2nd April 1981.

**COMMISSION OIL BULLETIN NO. 90**

4417.41

The weekly bulletin, published by the Commission gives the latest available data relating to the formation of prices in the Community.

The Commission considers that these bulletins should contribute to greater transparency as regards Community oil markets.

From 31st December 1978 to 23rd March 1981 the prices of crude oil and petroleum products have evolved as follows in current dollars :

- a) FOB prices for the Community's average external supplies of crude oil rose by 173 % as a result of the decisions taken by the oil exporting countries;
- b) the pre-tax consumer prices for the principal oil products<sup>(1)</sup> reflected increases in price for crude oil and imported finished products to the extent that they increased by an average of around 109% in the Community.
- c) if these prices had been in line with the Rotterdam spot prices, the figure would have been 119% instead of 109%.

---

(1) This level is particularly sensitive to variations in the value of the dollar in relation to the various national currencies. When prices expressed in national currencies are constant over a given period, appreciation of the dollar results in a fall in prices expressed in dollars, while conversely a decline in the value of the dollar leads to a rise in dollar prices.

Attached also, one table which indicates consumption price levels expressed in the national currencies.

- Cost of crude oil supply

Bulletin No. 90 contains, inter alia, a table in Annex which shows, by member state and for the Community as a whole, the quarterly development of average cif crude oil supply prices since the beginning of 1977. These average cif prices, obtained through the application of a 1976 Council Directive and a Commission implementing decision of 1977, stem from oil company declarations received by the Commission via member states. This information covers at least 85% of crude oil imports and includes local crude production. It gives average quarterly costs for each type of crude weighted by quantities supplied and calculated using the official market rates of exchange to give the most representative supply cost indications.

These figures can not be directly compared with the percentage increases in FOB prices shown below which, as in each weekly bulletin, represent an estimate of the average fob price increase between two specific dates, calculated for the Community on the basis of official prices established by OPEC and the normal crude oil supply slate for the Community.

Brussels, 9th April 1981.

**COMMISSION OIL BULLETIN NO. 91**

4417.41

The weekly bulletin, published by the Commission gives the latest available data relating to the formation of prices in the Community.

The Commission considers that these bulletins should contribute to greater transparency as regards Community oil markets.

From 31st December 1978 to 30th March 1981 the prices of crude oil and petroleum products have evolved as follows in current dollars :

- a) FOB prices for the Community's average external supplies of crude oil rose by 173 % as a result of the decisions taken by the oil exporting countries;
- b) the pre-tax consumer prices for the principal oil products<sup>(1)</sup> reflected increases in price for crude oil and imported finished products to the extent that they increased by an average of around 109% in the Community.
- c) if these prices had been in line with the Rotterdam spot prices, the figure would have been 118% instead of 109%.

(1) This level is particularly sensitive to variations in the value of the dollar in relation to the various national currencies. When prices expressed in national currencies are constant over a given period, appreciation of the dollar results in a fall in prices expressed in dollars, while conversely a decline in the value of the dollar leads to a rise in dollar prices.

Attached also, one table which indicates consumption price levels expressed in the national currencies.

- **Selling price of petroleum products**

The Petroleum Bulletin No. 91 contains amongst other things, annexed, two tables which indicate at 15th January 1981, consumption price levels most often used, including taxes, for each of the principal petroleum products in the member states of the Community.

These prices, expressed in the national currency of each Member State, with an indication at the given date of the rate of exchange against the dollar and the European Unity of Account) are made up by adding on the one hand the price less tax (estimated on a weekly basis in each of the Commission's Petroleum Bulletins) and the various charges and taxes in force in each Member Country.

Brussels, 30th April 1981.

**COMMISSION OIL BULLETIN NO. 93**

4417.41

The weekly bulletin, published by the Commission gives the latest available data relating to the formation of prices in the Community.

The Commission considers that these bulletins should contribute to greater transparency as regards Community oil markets.

From 31st December 1978 to 13th April 1981 the prices of crude oil and petroleum products have evolved as follows in current dollars :

- a) FOB prices for the Community's average external supplies of crude oil rose by 173 % as a result of the decisions taken by the oil exporting countries;
- b) the pre-tax consumer prices for the principal oil products<sup>(1)</sup> reflected increases in price for crude oil and imported finished products to the extent that they increased by an average of around 104% in the Community.
- c) if these prices had been in line with the Rotterdam spot prices, the figure would have been 110% instead of 104%.

(1) This level is particularly sensitive to variations in the value of the dollar in relation to the various national currencies. When prices expressed in national currencies are constant over a given period, appreciation of the dollar results in a fall in prices expressed in dollars, while conversely a decline in the value of the dollar leads to a rise in dollar prices.

Attached also, one table which indicates consumption price levels expressed in the national currencies.

**COMMISSION OIL BULLETIN NO. 94**

4917.41

The weekly bulletin, published by the Commission gives the latest available data relating to the formation of prices in the Community.

The Commission considers that these bulletins should contribute to greater transparency as regards Community oil markets.

From 31st December 1978 to 27th April 1981 the prices of crude oil and petroleum products have evolved as follows in current dollars :

- a) FOB prices for the Community's average external supplies of crude oil rose by 173 % as a result of the decisions taken by the oil exporting countries;
- b) the pre-tax consumer prices for the principal oil products<sup>(1)</sup> reflected increases in price for crude oil and imported finished products to the extent that they increased by an average of around 102% in the Community.
- c) if these prices had been in line with the Rotterdam spot prices, the figure would have been 105% instead of 102%.

(1) This level is particularly sensitive to variations in the value of the dollar in relation to the various national currencies. When prices expressed in national currencies are constant over a given period, appreciation of the dollar results in a fall in prices expressed in dollars, while conversely a decline in the value of the dollar leads to a rise in dollar prices.

Attached also, one table which indicates consumption price levels expressed in the national currencies.

- Selling price of petroleum products

The Petroleum Bulletin No. 94 contains amongst other things, annexed, two tables which indicate at 15 février 1981 consumption price levels most often used, including taxes, for each of the principal petroleum products in the member states of the Community.

These prices, expressed in the national currency of each Member State, with an indication at the given date of the rate of exchange against the dollar and the European Unity of Account) are made up by adding on the one hand the price less tax (estimated on a weekly basis in each of the Commission's Petroleum Bulletins) and the various charges and taxes in force in each Member Country.

**COMMISSION OIL BULLETIN NO. 95**

4417.41

The weekly bulletin, published by the Commission gives the latest available data relating to the formation of prices in the Community.

The Commission considers that these bulletins should contribute to greater transparency as regards Community oil markets.

From 31st December 1978 to 4th May 1981 the prices of crude oil and petroleum products have evolved as follows in current dollars :

- a) FOB prices for the Community's average external supplies of crude oil rose by 173 % as a result of the decisions taken by the oil exporting countries;
- b) the pre-tax consumer prices for the principal oil products<sup>(1)</sup> reflected increases in price for crude oil and imported finished products to the extent that they increased by an average of around 97% in the Community.
- c) if these prices had been in line with the Rotterdam spot prices, the figure would have been 102% instead of 97%.

(1) This level is particularly sensitive to variations in the value of the dollar in relation to the various national currencies. When prices expressed in national currencies are constant over a given period, appreciation of the dollar results in a fall in prices expressed in dollars, while conversely a decline in the value of the dollar leads to a rise in dollar prices.

Attached also, one table which indicates consumption price levels expressed in the national currencies.

**COMMISSION OIL BULLETIN NO. 96**

4419, 41

The weekly bulletin, published by the Commission gives the latest available data relating to the formation of prices in the Community.

The Commission considers that these bulletins should contribute to greater transparency as regards Community oil markets.

From 31st December 1978 to 11th May 1981 the prices of crude oil and petroleum products have evolved as follows in current dollars :

- a) FOB prices for the Community's average external supplies of crude oil rose by 173 % as a result of the decisions taken by the oil exporting countries;
- b) the pre-tax consumer prices for the principal oil products<sup>(1)</sup> reflected increases in price for crude oil and imported finished products to the extent that they increased by an average of around 95% in the Community.
- c) the increase in price level (95%) is identical to that in Rotterdam spot prices.

(1) This level is particularly sensitive to variations in the value of the dollar in relation to the various national currencies. When prices expressed in national currencies are constant over a given period, appreciation of the dollar results in a fall in prices expressed in dollars, while conversely a decline in the value of the dollar leads to a rise in dollar prices.

Attached also, one table which indicates consumption price levels expressed in the national currencies.

- **Selling price of petroleum products**

The Petroleum Bulletin No. 96 contains amongst other things, annexed, two tables which indicate at 15th March 1981 consumption price levels most often used, including taxes, for each of the principal petroleum products in the member states of the Community.

These prices, expressed in the national currency of each Member State, with an indication at the given date of the rate of exchange against the dollar and the European Unity of Account) are made up by adding on the one hand the price less tax (estimated on a weekly basis in each of the Commission's Petroleum Bulletins) and the various charges and taxes in force in each Member Country.

# REVENUE ACCOUNT STATEMENT

Statement of the revenues received by the State of New York during the year ending December 31, 1934, and the amount of the same which has been paid to the State of New York during the year ending December 31, 1934.

Filed on 11-2-1935

**COMMISSION OIL BULLETIN NO. 97**

4417.41

The weekly bulletin, published by the Commission gives the latest available data relating to the formation of prices in the Community.

The Commission considers that these bulletins should contribute to greater transparency as regards Community oil markets.

From 31st December 1978 to 18th May 1981 the prices of crude oil and petroleum products have evolved as follows in current dollars :

- a) FOB prices for the Community's average external supplies of crude oil rose by 173% as a result of the decisions taken by the oil exporting countries;
- b) the pre-tax consumer prices for the principal oil products<sup>(1)</sup> reflected increases in price for crude oil and imported finished products to the extent that they increased by an average of around 93% in the Community.
- c) if these prices had been in line with the Rotterdam spot prices, the figure would have been 92% instead of 93%.

---

(1) This level is particularly sensitive to variations in the value of the dollar in relation to the various national currencies. When prices expressed in national currencies are constant over a given period, appreciation of the dollar results in a fall in prices expressed in dollars, while conversely a decline in the value of the dollar leads to a rise in dollar prices.

Attached also, one table which indicates consumption price levels expressed in the national currencies.

COMMISSION OIL BULLETIN NO. 100

4417.41

The weekly bulletin, published by the Commission gives the latest available data relating to the formation of prices in the Community.

The Commission considers that these bulletins should contribute to greater transparency as regards Community oil markets.

From 31st December 1978 to 8 June 1981 the prices of crude oil and petroleum products have evolved as follows in current dollars :

- a) FOB prices for the Community's average external supplies of crude oil rose by 173% as a result of the decisions taken by the oil exporting countries;
- b) the pre-tax consumer prices for the principal oil products<sup>(1)</sup> reflected increases in price for crude oil and imported finished products to the extent that they increased by an average of around 84 % in the Community.
- c) if these prices had been in line with the Rotterdam spot prices, the figure would have been 88% instead of 84 %.

(1) This level is particularly sensitive to variations in the value of the dollar in relation to the various national currencies. When prices expressed in national currencies are constant over a given period, appreciation of the dollar results in a fall in prices expressed in dollars, while conversely a decline in the value of the dollar leads to a rise in dollar prices.

Attached also, one table which indicates consumption price levels expressed in the national currencies.
